

Caski Consulting Ltd

Caski Background

Caski Consulting Ltd, was founded by two engineering educated, Information System Professionals who between them have over 40 years experience of designing and installing information systems.

Both Directors are degree-qualified electrical engineers and bring the pragmatic approach that an engineering education provides to the field of Consulting.

Caski Consulting Ltd (Caski) was formed after both Directors left their previous employment at the same time, having worked together successfully on several system implementations over the previous 5 years.

Since the company's inception, other like-minded professionals have either been directly employed, or have joined the Caski Associate programme, which has strengthened the company knowledge base and increased the range of services on offer. There have also been some key agreements with larger firms who see the Caski skill-set as an advantageous added-value tool when devising and delivering their own proposals and projects.

The First Seven Years

The first seven years have seen Caski progress from small specialist organisation to a company capable of delivering business benefit to a range of large businesses. The customer base is currently focused in the highly regulated Nuclear Industry where Caski's safety record and the quality of our work has led to repeat orders and ever-increasing confidence from clients.

Over the next seven years, Caski is seeking to consolidate its position in the Nuclear industry, and is looking for the opportunity to deliver some of the benefits realised for existing clients into other regulated environments. The Caski organisation brings with it a resource base that can deal with a complete programme cycle, or provide assistance to any single part of a project where a client recognises a requirement for additional support.

Caski is large enough to confidently deliver major programmes of work, and small enough to care about the detail.

Caski personnel have a vision of always providing clear solutions to our clients, aiming to exceed their expectations by delivering simple and effective systems to meet their needs.

Working within the constraints of clients' business systems and environments, Caski has been able to deliver a range of services including document management, work control systems, data migration and system support. In providing these services to clients, Caski have drawn upon expertise in business analysis, project planning, project management, change management, implementation, training and post-go-live support.

Whilst Caski is most effective when it is able to run the complete programme, previous performance has led clients to call on them when specific programme areas were in need of assistance. Caski is able to rapidly mobilise resources into any one of the programme phases, and to enable a recovery for the client.

If your company is undergoing a change programme or looking for business improvement - consider the case studies over the next few pages.

Caski will provide relevant expertise for an early, no obligation discussion which will prove useful in clarifying your targets for the future.

As Managing Director I have oversight of all our work, and I strive for high levels of customer satisfaction. Caski benefits by being able to draw on significant additional experience through the Associate programme, ensuring a comprehensive solution set to client requirements.

Phil N. Care

Absolute Consulting Inc.

Company Profile

Absolute Consulting, Inc. provides professional/technical support, managed task and program services, performance improvement services, nuclear fuel storage services, and decommissioning services. The company's mission is to help companies streamline operations, increase productivity, and optimize their work environment.

Nuclear Fuels & Environmental Management Division

As a division of Absolute Consulting, Inc., Nuclear Fuels & Environmental Management (NFEM) provides a complete range of nuclear project services in the following fields: Dry Fuel Storage, Decommissioning & Environmental Services and Plant Operations.

The multidisciplinary team has the project management depth to develop innovative solutions for our clients' challenging and often complex problems. The diverse background and experience of Absolute Consulting, Inc. leads to effective project scheduling and cost savings for our customers.

Absolute Consulting, Inc. has a thorough understanding of all aspects of the nuclear industry and has established respected working relationships with many of the regulatory agencies. The NFEM team of professionals has vast cross-disciplinary experience performing pool-to-pad projects since the mid 1990s.

NFEM provides fully integrated services from initial site reconnaissance, planning and implementation, to project completion.
